

Telecom Vision API - Setup Guide

1. Prerequisites

Before you start, ensure the new device has:

- * Docker Desktop (includes Docker Compose)
- * Git (to clone the project)
- * Disk Space: At least 5GB (for Docker images and AI model weights)
- * NVIDIA GPU (Optional): With NVIDIA Container Toolkit installed for acceleration

2. Steps to Run

Step 1: Clone the Project

```
git clone <your-repo-url>
cd telecom-vision-api
```

Step 2: Add Model Weights

Manually copy these .pt files into the model_weights/ folder:

- * best.pt
- * power_supply_best.pt
- * 3x3_4x4_new_model.pt
- * Internal_best.pt
- * fiber_node_model.pt

Step 3: Create Environment File

```
cp .env.example .env
```

Step 4: Run with Docker

```
docker compose up --build -d
```

3. Verification

1. API Docs: <http://localhost:8000/docs>
2. Health Check: <http://localhost:8000/api/v1/health> (should show status: ok)
3. Monitor: <http://localhost:5555> (Flower dashboard)
